OPENAI'S JOURNEY: FROM INCEPTION TO CUTTING-EDGE MODELS

DevelopmentIsland.com

OPENAI'S JOURNEY:

OpenAI was founded in December 2015 as a non-profit organisation.

Primary aim: Ensure that artificial general intelligence (AGI) benefits all of humanity.

In 2019, OpenAI underwent a transformation and shifted to a for-profit model.

By becoming a for-profit entity, OpenAI could attract funding and partnerships.

OPENAI'S LANDMARK MODELS

GPT-2 (Generative Pre-trained Transformer 2) - Release Year: 2019

GPT-3 (Generative Pre-trained Transformer 3) - Release Year: 2020

DALL·E - Release Year: 2021

Whisper - Release Year: 2022

GPT-4 (Generative Pre-trained Transformer 4) - Release Year: 2023

HOW CHATGPT WORKS BEHIND THE SCENES AND HOW IT WAS TRAINED

DevelopmentIsland.com

UNDERSTANDING THE ARCHITECTURE

ChatGPT is built on the foundation of the transformer architecture.

The transformer consists of an encoder-decoder structure.

ChatGPT mainly relies on the encoder part as it is designed for single-turn tasks.

HOW THE ENCODER WORKS

Input text

Layers of self attention

Neural
Networks

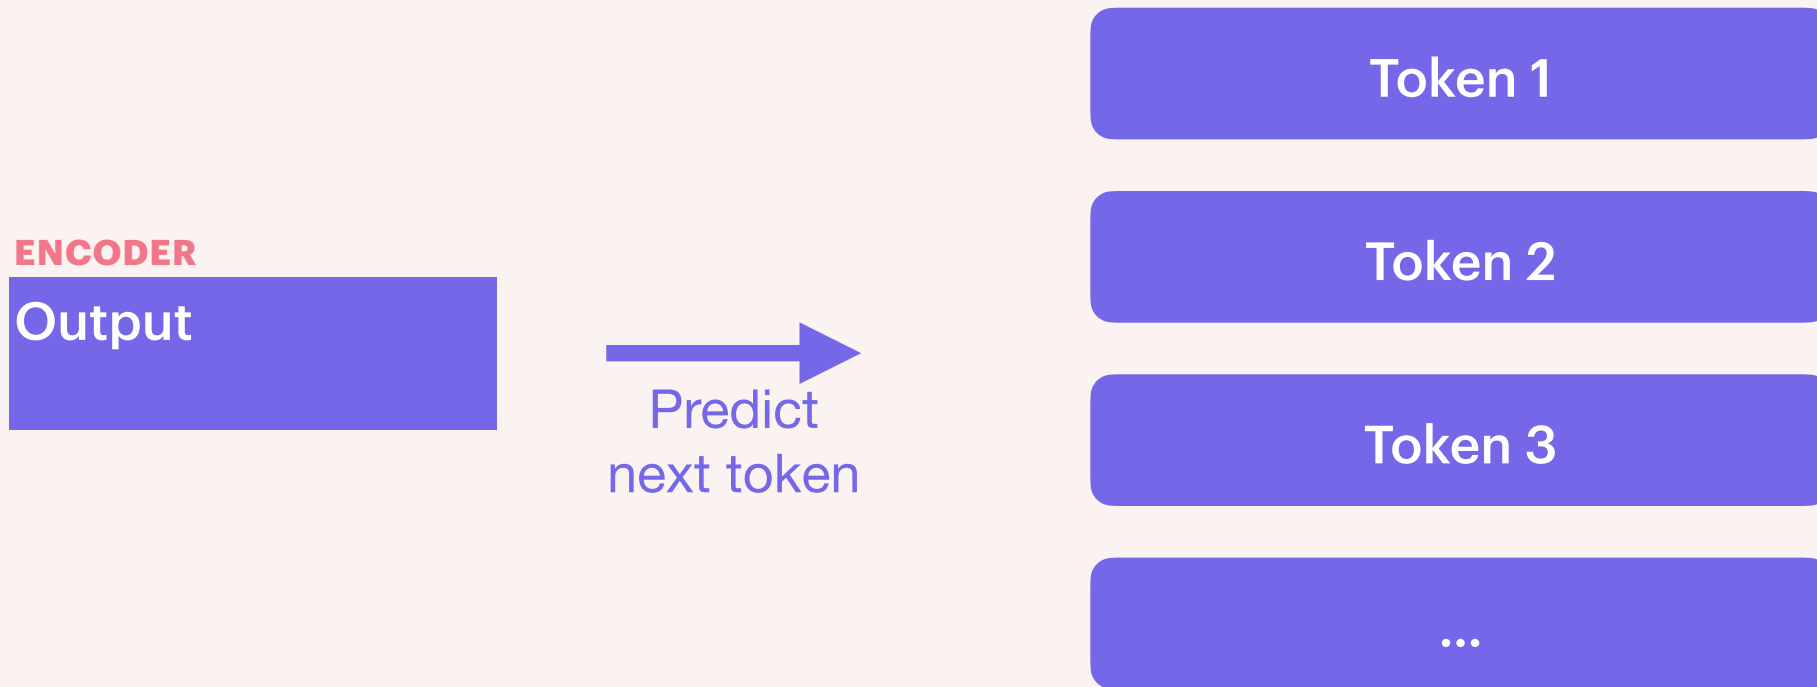

Each word

Weight

HOW THE ENCODER WORKS

TRAINING DATA AND PREPROCESSING

The training of ChatGPT involves exposing it to a massive dataset containing parts of the Internet.

It learns from a diverse range of sources, including books, articles, websites, and other texts.

Tokenization is a key step, where the text is divided into smaller units called tokens.

Cars are amazing because

THE TRAINING PROCESS

ChatGPT is trained using a method called unsupervised learning.

It learns to predict the next word in a sequence based on the context provided by the preceding words.

During training, the model compares its predictions with the actual text from the dataset and calculates a loss, which represents how far off its predictions are from the correct text.

The model then uses optimization algorithms like stochastic gradient descent (SGD) or variants such as Adam to minimize this loss, gradually improving its performance.

FINE-TUNING AND DEPLOYMENT

After the initial training, ChatGPT undergoes fine-tuning to improve its performance on specific tasks or to adhere to guidelines and safety measures set by OpenAI.

Fine-tuning involves training the model on a narrower dataset with human-provided demonstrations and comparisons to fine-tune its behaviour.

Once the training and fine-tuning phases are complete, ChatGPT is ready for deployment, and it can interact with users in real-time, generating responses and providing valuable insights across various applications.

MODELS, THEIR PERFORMANCE AND PRICING

	Series	Context (input + output)	Completion API	Chat API	Price per 1M input tokens	Price per 1M output tokens
text-davinci-003	GPT-3	4096 tokens	X		20\$	20\$
text-curie-001	GPT-3	4096 tokens	X		2\$	2\$

GPT-3 Series	Description	Strengths
text-davinci-003	Most capable model in the GPT-3 series can perform any task the other GPT-3 models can, often with higher quality, longer output and better instruction following. It can process up to 4000 tokens per request.	Complex intent, cause and effect, creative generation, search, summarization for audience.
text-curie-001	Very capable, but faster and lower cost than text-davinci-003	Language translation, complex classification, sentiment summarisation.
text-babbage-001	Capable of straightforward tasks very fast and lower cost.	Moderate classification, semantic search.
text-ada-001	Capable of simple tasks, usually the fastest model in the GPT-3 series, and lowest cost.	Parsing text, simple classification, address correction, keywords
text-davinci-002	Second generation model in the GPT-3 series, can perform any task the earlier GPT-3 models can, often with less context.	Complex intent, cause and effect, creative generation, search summarization for audience
text-davinci-001	Older version of the most capable model in the GPT-3 series, can perform any task the other GPT-3 models can, often with less context	Complex intent, cause and effect, creative generation, search summarization for audience.

GPT-3.5 & GPT-4 Series	Description	Strengths
	gpt-3.5-turbo A highly advanced language model based on the GPT-3.5 architecture, capable of understanding and generating human-like text.	Versatile and creative in generating coherent responses, capable of handling a wide range of prompts, and provides accurate and detailed information.
	gpt-3.5-turbo-16k An enhanced version of gpt-3.5-turbo with an increased context window of 16,000 tokens, allowing for longer and more comprehensive interactions.	Offers improved context understanding, enabling it to generate more contextually relevant responses and handle longer conversations effectively.
	gpt-4 8K context The next iteration of the GPT series, gpt-4 8K context provides enhanced language capabilities and an expanded context window of 8,000 tokens.	Exhibits improved text generation quality, contextual understanding, and has a larger memory capacity, enabling it to handle complex tasks and longer conversations with greater accuracy.
	gpt-4 32k context The most advanced version of the GPT series, gpt-4 32k context offers even greater language proficiency and an expanded context window of 32,000 tokens.	Provides superior context comprehension and generates highly coherent and contextually accurate responses. It excels in handling extremely complex queries and longer conversations while maintaining high-quality outputs.

Text: ""Hello, how are you? I hope you're doing well.""

PARAPHRASING

PROMPT

Rephrase the following sentence.

Sentence: ""The cat is sleeping peacefully on the windowsill.""

PARAPHRASING

PROMPT

Rephrase the following text for an audience of children under 7 years old.

Text: ""Global warming refers to the long-term increase in Earth's average surface temperature due to human activities, primarily the emission of greenhouse gases into the atmosphere. The most significant greenhouse gas is carbon dioxide (CO₂), which is released through the burning of fossil fuels such as coal, oil, and natural gas. These gases trap heat from the sun and prevent it from escaping back into space, leading to a gradual warming of the planet.""

Write an essay on the benefits of physical exercise.

REVISED PROMPT

Write an essay on the benefits of physical exercise. Step 1: Begin with a captivating introduction. Step 2: Explain the importance of exercise for physical health. Step 3: Discuss the positive effects on mental well-being. Step 4: Provide examples and evidence. Step 5: Conclude with a strong summary.

ORIGINAL PROMPT

Write an essay on the importance of reading books.

REVISED PROMPT

Write an essay on the importance of reading books following this structure:

Introduction:

1. Begin with a captivating opening sentence that grabs the reader's attention.
2. Provide a brief background on the significance of reading books.
3. Present a clear thesis statement that highlights the main argument.

Body Paragraphs:

4. Start the first paragraph by discussing the benefits of reading, such as knowledge expansion and cognitive development.
5. Give examples and evidence to support the claims.
6. Transition to the second body paragraph and explore how reading enhances empathy and emotional intelligence.
7. Provide real-life instances to illustrate the point.
8. In the third body paragraph, emphasize the role of reading in fostering creativity and imagination.
9. Support the argument with relevant examples.

Conclusion:

10. Summarize the main points discussed in the body paragraphs.
11. Reinforce the importance of reading and its impact on personal growth.
12. Conclude with a thought-provoking statement that leaves a lasting impression on the reader."

CHAT VS COMPLETION API: MODEL STRENGTHS

GPT-3 Series	Description	Strengths
text-davinci-003	Most capable model in the GPT-3 series can perform any task the other GPT-3 models can, often with higher quality, longer output and better instruction following. It can process up to 4000 tokens per request.	Complex intent, cause and effect, creative generation, search, summarization for audience.
text-curie-001	Very capable, but faster and lower cost than text-davinci-003	Language translation, complex classification, sentiment summarisation.
text-babbage-001	Capable of straightforward tasks very fast and lower cost.	Moderate classification, semantic search.
text-ada-001	Capable of simple tasks, usually the fastest model in the GPT-3 series, and lowest cost.	Parsing text, simple classification, address correction, keywords
text-davinci-002	Second generation model in the GPT-3 series, can perform any task the earlier GPT-3 models can, often with less context.	Complex intent, cause and effect, creative generation, search summarization for audience
text-davinci-001	Older version of the most capable model in the GPT-3 series, can perform any task the other GPT-3 models can, often with less context	Complex intent, cause and effect, creative generation, search summarization for audience.

GPT-3.5 & GPT-4 Series	Description	Strengths
gpt-3.5-turbo	A highly advanced language model based on the GPT-3.5 architecture, capable of understanding and generating human-like text.	Versatile and creative in generating coherent responses, capable of handling a wide range of prompts, and provides accurate and detailed information.
gpt-3.5-turbo-16k	An enhanced version of gpt-3.5-turbo with an increased context window of 16,000 tokens, allowing for longer and more comprehensive interactions.	Offers improved context understanding, enabling it to generate more contextually relevant responses and handle longer conversations effectively.
gpt-4 8K context	The next iteration of the GPT series, gpt-4 8K context provides enhanced language capabilities and an expanded context window of 8,000 tokens.	Exhibits improved text generation quality, contextual understanding, and has a larger memory capacity, enabling it to handle complex tasks and longer conversations with greater accuracy.
gpt-4 32k context	The most advanced version of the GPT series, gpt-4 32k context offers even greater language proficiency and an expanded context window of 32,000 tokens.	Provides superior context comprehension and generates highly coherent and contextually accurate responses. It excels in handling extremely complex queries and longer conversations while maintaining high-quality outputs.

ENHANCEMENTS OF GPT-4 COMPARED TO GPT-3

Topics	Enhancements of GPT-4 compared to GPT-3
Linguistic Finess	GPT-4 has improved linguistic finesse, understanding and generating different dialects, and responding to emotions expressed in the text.
Answering complex questions	GPT-4 can answer complex questions by synthesizing information from multiple sources and can properly cite sources when generating text.
Creativity	GPT-4 demonstrates improved creativity and coherence in generating stories, poems, and essays.
Problem-solving	GPT-4 has enhanced complex problem-solving abilities, including solving advanced mathematical and scientific problems.
Programming abilities	GPT-4 has improved programming capabilities, allowing it to generate code snippets and debug existing code efficiently.
Data to text	GPT-4 can analyze and comment on images and graphics, making it versatile for tasks involving visual content.
Minimising inappropriate responses	GPT-4 implements better mechanisms to minimize inappropriate or biased responses.

Topics	Enhancements of GPT-4 compared to GPT-3
Number of parameters	GPT-4 has been trained on more data and can consider over 1 trillion parameters, while GPT-3.5 considers 175 billion parameters.
Human and AI feedback	GPT-4 was trained through human and AI feedback for an additional six months.
Data recency	GPT-4 is trained on more recent data, including information up to September 2021 vs June 2020 for GPT-3
Illegal responses	GPT-4 has improved safeguards to reduce the likelihood of delivering harmful or illegal responses.
Information synthesis	GPT-4 has enhanced informational synthesis and can consider multiple factors and sources of information.
Context	GPT-4 has a larger context window of around 25,000 words.
Speed	GPT-4 is slower in its responses compared to GPT-3.5, taking a minute or more for larger responses.

**GPT-4-0314 (MARCH 2023)
IS NOW DEPRECATED**

GPT-4-0613 (JUNE 2023)

WHAT IS NEW?

FUNCTION CALLING

PROMPT

What's the weather like in London?
Temperature should be measured in Celsius.

FUNCTION NAME AND PARAMETERS

`get_current_weather({location, unit})`

OUTPUT

It is sunny in London with a temperature of
25 degrees Celsius.

CHATGPT

Function: `get_current_weather`

Location: London

Unit: Celcius

WEATHER API

Function: `get_current_weather`

Temperature: 25

Unit: Celcius

Description: Sunny

CHATGPT

PROMPT

What's the weather like in London? Temperature should be measured in Celsius.

FUNCTION NAME AND PARAMETERS

"name": "get_current_weather"

"Description": "Get the current weather in a given location"

"Parameters" => object with two properties "location" (string) and "unit" (string)

OUTPUT USING FUNCTION CALLING IN THE LATEST GPT-4 VERSION

```
"function_call":{  
  "name": "get_current_weather"  
  "arguments": "{ \"location\" : \"London\" , \"unit\" : \"celsius\" }"  
}
```

PROMPT

Email Peter to check if he is attending the meeting.

FUNCTION NAME AND PARAMETERS

send_email({to, body})

CHATGPT

Function: send_email

To: Peter

Body: Hi Peter, are you coming to the meeting?

INTERNAL API

Function: send_email

email_sent: true

OUTPUT

I sent the email to Peter.

CHATGPT

PROMPT

Email Peter to check if he is attending the meeting.

FUNCTION NAME AND PARAMETERS

"name": "send_email"

"Description": "send an email to someone"

"Parameters" => object with two properties "to" (string) and "body" (string)

OUTPUT USING FUNCTION CALLING IN THE LATEST GPT-4 VERSION

```
"function_call":{  
  "name": "send_email"  
  "arguments": "{ \"to\": \"Peter\", \"body\": \"Are you coming to the meeting?\" }"  
}
```

PROMPT

Who are my top ten customers this month?

FUNCTION NAME AND PARAMETERS

```
get_customers_by_revenue({start_date,  
end_date, limit})
```

OUTPUT

Your top 10 customers this month are:

Customer 1

...

Customer 10

CHATGPT

Function: get_customers_by_revenue

start_date: 01-07-2023

end_date: 31-07-2023

limit: 10

INTERNAL API

Function: get_customers_by_revenue

[customer1, ... , customer10]

CHATGPT

PROMPT

Who are my top ten customers this month?

FUNCTION NAME AND PARAMETERS

"name": "get_customers_by_revenue"

"Description": "Get top customers by revenue"

"Parameters" => object with 2 properties "start_date" (string), "end_date" (string) & limit (string)

OUTPUT USING FUNCTION CALLING IN THE LATEST GPT-4 VERSION

"function_call":{

 "name": "get_customers_by_revenue"

 "arguments": "{ \"start_date\" : \"01-07-2023\" , \"end_date\" : \"31-07-2023\" , \"

 \"limit\" : \"10\" }"
