Audio translation App Source Code

Attached file: The final source code for the Audio translation App.

How to run the Code:

1. Download the zip file and uncompress it then replace the OPENAI API in the .env file with your own API.

2. Open a terminal inside the root directory.

3. Run "npm install".

4. Open a terminal inside the frontend folder.

5. Run "npm install".

6. Run "npm start" in both terminals and go to: http://localhost:3000/translateaudio
